OCTOBER POSTPONED UNTIL NOVEMBER

HOW ACCURATE IS OUR MEMORY?

DOES TECHNOLOGY MAKE US STUPID?

**Dr. Indre Viskontas from the University of San Francisco
gives a historical perspective on our adjustment to technology by DVD.**

For our November Fore(In)Sight Seminar we are responding to questions in our daily newsfeed, such as, “What happened decades ago ?” “Can we be sure?” As a nation we have been preoccupied over whether old accusations of misconduct are true.

In examining whether our memory is accurate we might skim pages 70 through 72 of our basic reference book, Love and Problems of Living. Additionally, more has been discovered in memory research. At our seminar we can hear and see new perspectives.

Can you come? We would like to hear from you ahead of time about whether you can come. **You can respond by E-mailing sandralewis@foreinsight.org or by calling (478) 474-3869 or (478) 319-2027. If you need to get a map to find the church you can try Mapquest on the Internet. If you need a map mailed to you, contact our office,** with the phone numbers above. *[Our Web Site now has this notice, so you can encourage your friends to check it and come, too -- www.foreinsight.org](http://www.foreinsight.org)*
